**NISULA**  
THE FUTURE OF EFFICIENT LOGGING

**NEW N6  
THINNING HARVESTER**

# NISULA N6e

ONE MACHINE,  
MANY DIFFERENT  
POSSIBILITIES

The new Nisula N6e is equipped with a short main boom, the Palfinger S110F96, with a reach of 10 meters, makes the machine really versatile for both forestry work and roadside maintenance. Together with the Nisula 500 series harvester head, it is an excellent thinning harvester. Equipped with a new Nisula 335E + shear head, the N6E will become a truly cost-effective and productive energy wood harvester. The new N6e is also available with a bush mower for roadside maintenance, one machine offers you many different options.

# NISULA N6

NEXT GENERATION  
THINNING HARVESTER

The all new Nisula N6 harvester has been completely redesigned to meet the needs of forest thinning operations. The Nisula N6 harvester is completely re-designed, great for first thinning-as well as final felling operations. The features of the machine have taken a huge step forward. N6 harvester aims to make thinning operations a year-round activity. The ground pressure of the six-wheeled machine is very low, so the thinning operations can be done even in summer or wet conditions.

Thanks to its size, weight and technical features the new N6 is a modern and efficient forest thinning harvester.

## NISULA 555H

The new-generation Nisula 555H harvester head offers unique properties for thinning and final felling of small-stem stands. The manufacturing quality and materials of the head are of the standard that Nisula is known for. Considering its properties, the head is exceptionally light, only 810-840 kg (1 786 – 1 851lb), depending on the equipment.

## 555H OFFERS

### A LOT OF NEW FEATURES:

1. New hydraulic valve design, for 150-250l/min oil flow (39-66 gal/min)
2. New length measuring system, with hydraulic control and magnetic encoders
3. New touchless diameter measuring system with magnetic encoder
4. Patented Golfinger shear-cut (optional)
5. New Nisula NSU saw system
6. New bolted sawbox
